

# CONTAINER

## Certificates

Контейнеры для стерилизации, хранения и транспортировки ERMIS® с широким набором принадлежностей, позволяют систематизировать процесс стерилизации всего применяемого в ЛПУ инструмента.

Удобство в использовании и исключительная функциональность контейнеров обеспечивает безопасность и контроль процесса стерилизации. Хранение и транспортировка, а также утилизация отходов, отлично организовывается с помощью наших контейнеров.

Данные контейнеры для стерилизации соответствуют международным стандартам и допущены к применению на территории РФ.

Произведенные из анодированного алюминия, контейнеры для стерилизации ERMIS®, отличаются легким весом и превосходными свойствами высыхания. Окрашивание крышек контейнеров в разные цвета и применение идентификационных бирок, обеспечивает точное управление процессом стерилизации в пределах любого ЛПУ.

Широкий диапазон предлагаемой продукции и возможность изготовления по индивидуальным заказам, удовлетворит любую потребность в нашей продукции.

### Systematic organisation

The ERMIS® sterilisation container systems allow you a systematic organisation of your entire instrument sterilisation. The comfortable handling and diversity of our containers gives you safety and control for your instrument sterilisation. Storage, transportation and disposal are perfectly organised with our containers. Our sterilisation container systems are conform to the international standard requirements. ERMIS® sterilisation containers are made of anodised aluminium, have minimum weight and excellent drying properties. Colour-coded lids and identification labels enable you precise controlling of your instrument sterilisation.

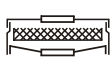

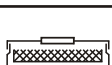

Any changes or adjustments in your requirements are no problem due to our extensive range of products.

Standard Model

**Choose between  
our Standard  
and our Safety Model.**

The safety lid protects against contamination during transportation and storage. The filter and standard safety lid can only be separated by complete opening of the container. For a simple detachment of the safety lid from the perforated lid we offer also a new model of safety lid with exterior press-button.

New Safety Model

Benefits

**1** ERMIS<sup>®</sup>

The new ERMIS<sup>®</sup> container models with filter are provided with a longer handle, which guarantees an easy and safe manipulation. The silicone tube around the handle protects against burning and sliding.

**2**

The closures of these containers are furnished with a feather system that insures a stable closing and cancels the overpressure that is formed within the container.

**3**

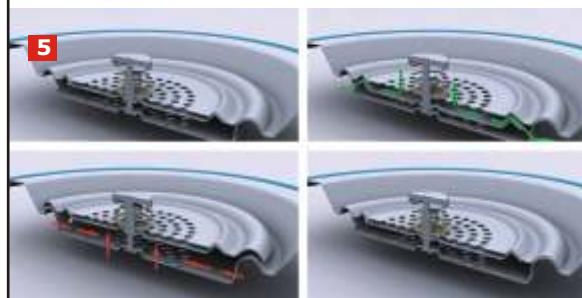

The filter retainer is locked by pressing down in center of the filter. The opening of the filter retainer succeeds by pressing the plate.

**4**

The tag holders of the container models with filter enable a transparent and clear traceability of the sterile instruments.

**5**

As alternative to our sterilisation container with filter we offer you safe sterilisation, storage and transport of the surgical instruments also with our new container with a valve system. In case of a pressure difference opens the valve due to a spring mechanism and by this the steam penetrates, respectively escapes the container. When the pressure has been equalised the disks of the valve are pushed against each other and thus remains the mechanism closed.
